## Annotated Reading of the **Vue.js** Components Fundamentals Course of the *Vue School*

These are my notes written in pandoc markdown (Casiano 2021) from watching the (VueSchool 2018) and (VueSchool 2019) courses and other references.

These notes have been elaborated using pandoc to translate it the markdown to HTML.

At the current time (December 2021), this notes are experimental, since the HTML generated by pandoc has some incompatibilities with Vue and I had to resort to some awful tricks to made them work.

1. I'm using the pandoc-include filter
2. The citation styles have been taken from (Org 2021).
3. The HTML generation is reached using (Mushiyo 2017), a Pandoc HTML template that has a navbar on the top of the page for website navigation, and a TOC (table of contents) on the sidebar for page navigation

To see the result, you can

1. Open the deployment in the GitHub pages <https://crguezl.github.io/learning-vue-geting-started-guide/> of the repo [crguezl/learning-vue-geting-started-guide](https://github.com/crguezl/learning-vue-geting-started-guide) containing the notes or

2. To install it locally, fork the repo. You have to have `pandoc` installed and then
  1. Run `npm install-pandoc-dependencies` to install `pandoc-include`
  2. Run `npm start` to compile the sources and open the resulting `index.html` file.

You can download the pdf version of this document here or by clicking in the left upper corner.
